

IMS Policy

(Integrated Management System)

The fundamental orientation and goal of EESH, a.s. is to be a competitive entity offering high-quality and reliable products, while creating a strong and dependable foundation for its customers.

The company's main strategic objectives include:

- To deliver only those products that meet or exceed customer expectations.
- To anticipate customer expectations, continuously monitor and evaluate their requirements and needs, and align organizational activities accordingly.
- To achieve a significant position in the region.
- To cooperate only with suppliers whose product quality allows us to meet customer needs, and who are genuinely committed to environmental protection and the health and safety of their employees.
- To ensure the continuous advancement of the company through ongoing employee qualification improvement. Through education and awareness, the company strengthens employee consciousness in occupational safety and environmental care.
- Every employee is responsible for the quality of their work and for adhering to occupational health and safety (OHS) and environmental protection principles at their workplace.
- To continuously invest in infrastructure to improve service quality and reduce negative impacts on the environment and worker safety.
- The company applies preventive principles to minimize negative environmental and health impacts. It identifies risks associated with its operations and sets environmental, OHS, and fire protection programs and goals accordingly.
- Through continuous process monitoring, implementation of corrective actions, and evaluation of their effectiveness, the company aims to permanently improve its Integrated Management System (IMS).
- To reduce the risk of occupational injuries and environmental threats by complying with applicable legal and other regulations and standards.
- To actively communicate with employees about any opportunities to improve workplace safety, including prevention.

Management expects employees to:

- Strictly and accurately follow technological procedures and those defined in the IMS documentation.
- Take full responsibility for the quality and safety of their own work.
- Be aware of and minimize the environmental impact of their activities.
- Prevent errors through consistent self-checking.
